INTRODUCTION TO NON-FERROUS METALS CASH-TO-FORWARD PREMIA ANALYSIS

Date: 01-07-2025

This report provides a detailed analysis of the cash-to-3M spreads and premium movements across key non-ferrous metals. The cash-to-premium structure reflects near-term supply-demand dynamics, offering critical insights into physical market tightness, investor sentiment, and potential price risks. Monitoring shifts between contango and backwardation helps market participants assess inventory pressures, trade flows, and spot market appetite. The data is pertaining to LME markets.

HOW TO ACT ON THE CASH METAL REPORT?

Traders, hedgers, and procurement managers should use the cash-to-premium trends to fine-tune their inventory strategies, time physical purchases or sales, and adjust hedging positions. A tightening spread (moving into backwardation) suggests stronger near-term demand or supply constraints, signaling opportunities to secure material early or consider bullish positioning. Conversely, a widening contango may indicate loosening market conditions, favoring deferred procurement strategies or defensive hedging adjustments.
